

TEST REPORT

FCC ID: 2ALGR-SA70

Product: cell phone signal booster

Model No.: SA70

Additional Model No.: SWA70, SBA70

Trade Mark: N/A

Report No.: TCT191107E004

Issued Date: Nov. 21, 2019

Issued for:

**Shenzhen Fuzhixing Electronics Co., Ltd.
5/F, Block C, Penglongpan Hi-technology Park, Dafu Ind. Zone, Guanlan,
Longhua New Dist., Shenzhen, Guangdong, China**

Issued By:

**Shenzhen Tongce Testing Lab.
1B/F., Building 1, Yibaolai Industrial Park, Qiaotou, Fuyong, Baoan District,
Shenzhen, Guangdong, China**

TEL: +86-755-27673339

FAX: +86-755-27673332

Note: This report shall not be reproduced except in full, without the written approval of Shenzhen Tongce Testing Lab.

This document may be altered or revised by Shenzhen Tongce Testing Lab. personnel only, and shall be noted in the revision section of the document. The test results in the report only apply to the tested sample.

| Address: | 5/F, Block C, Penglongpan Hi-technology Park, Dafu Ind. Zone, Guanlan, Longhua New Dist., Shenzhen, Guangdong, China |
| Date of Test: | Nov. 08, 2019 - Nov. 20, 2019 |
| Applicable Standards: | FCC CFR Title 47 Part 20.21 |

The above equipment has been tested by Shenzhen Tongce Testing Lab. and found compliance with the requirements set forth in the technical standards mentioned above. The results of testing in this report apply only to the product/system, which was tested. Other similar equipment will not necessarily produce the same results due to production tolerance and measurement uncertainties.

| Emission Designator: | G7D |
| FCC Classification: | B2W/Wideband Consumer Booster(CMRS) |
| Power Supply: | DC 12V |
| AC adapter: | Adapter Information: Model: FZX-12-2 Input: AC 100-240V, 50/60Hz, 0.3A Output: DC 12V, 2A |

4. General Information

4.1. Test environment

| Operating Environment: | |
|------------------------|-----------|
| Temperature: | 25.0 °C |
| Humidity: | 56 % RH |
| Atmospheric Pressure: | 1010 mbar |

4.2. Description of Support Units

The EUT has been tested as an independent unit together with other necessary accessories or support units. The following support units or accessories were used to form a representative test configuration during the tests.

| Equipment | Model No. | Serial No. | FCC ID | Trade Name |
|-----------|-----------|------------|--------|------------|
| / | / | / | / | / |

5. Facilities and Accreditations

5.1. Facilities

The test facility is recognized, certified, or accredited by the following organizations:

- FCC - Registration No.: 645098

Shenzhen Tongce Testing Lab

The 3m Semi-anechoic chamber has been registered and fully described in a report with the (FCC) Federal Communications Commission. The acceptance letter from the FCC is maintained in our files.

- IC - Registration No.: 10668A-1

The 3m Semi-anechoic chamber of Shenzhen TCT Testing Technology Co., Ltd. has been registered by Certification and Engineering Bureau of Industry Canada for radio equipment testing

5.2. Location

Shenzhen Tongce Testing Lab

Address: 1B/F., Building 1, Yibaolai Industrial Park, Qiaotou, Fuyong, Baoan District, Shenzhen, Guangdong, China

TEL: +86-755-27673339

5.3. Measurement Uncertainty

The reported uncertainty of measurement $y \pm U$, where expended uncertainty U is based on a standard uncertainty multiplied by a coverage factor of $k=2$, providing a level of confidence of approximately 95 %.

| No. | Item | MU |
|-----|-------------------------------|-------------------------|
| 1 | Conducted Emission | $\pm 2.56\text{dB}$ |

| 7 | Humidity | $\pm 1.0\%$ |

6. Test Results and Measurement Data

6.1. Authorized Frequency Band Verification

6.1.1. Test Specification

| | |
|--------------------------|---|
| Test Requirement: | FCC Part20 Section 20.21(e)(3) |
| Test Method: | 935210 D03 Signal Booster Measurements v04r03 |
| Limit | Uplink: 698 MHz - 716 MHz, Downlink: 728 MHz - 746 MHz |
| Test Setup: | <pre> graph LR SG[Signal Generator] --> EUT[EUT] EUT --> RA[RF Attenuator (if required)] RA --> SA[Spectrum Analyzer] </pre> |
| Test Procedure: | <p>935210 D03 Signal Booster Measurement v04r03</p> <ol style="list-style-type: none"> Connect the EUT to the test equipment as shown in Figure 1. Begin with the uplink output (donor) port connected to the spectrum analyzer. Set the spectrum analyzer resolution bandwidth (RBW) for 100 kHz with the video bandwidth (VBW) $\geq 3 \times$ the RBW, using a PEAK detector with the MAX HOLD function. Set the center frequency of the spectrum analyzer to the center of the operational band under test with a span of 1 MHz. Set the signal generator for CW mode and tune to the center frequency of the operational band under test. Set the initial signal generator power to a level that is at least 6 dB below the AGC level specified by the manufacturer. Slowly increase the signal generator power level until the output signal reaches the AGC operational level. Reduce the signal generator power to a level that is 3 dB below the level noted above, then manually reset the EUT (e.g., cycle ac/dc power). Reset the spectrum analyzer span to 2xthe width of the CMRS band under test. Adjust the tuned frequency of the signal generator to sweep 2xthe width of the CMRS band using the sweep function. The AGC must be deactivated throughout the entire sweep. Using three markers, identify the CMRS band edges and the frequency with the highest power. Affirm that the values of all markers are visible on the display of the spectrum analyzer (e.g., marker table set to on). Capture the spectrum analyzer trace for inclusion in the test report. Repeat 7.1c) to 7.1j) for all operational uplink and downlink bands. |
| Test Result: | PASS |

6.1.2. Test Instruments

| Equipment | Manufacturer | Model | Serial Number | Calibration Date | Calibration Due |
|-------------------|--------------|--------|---------------|------------------|-----------------|
| Signal Generator | Agilent | N5182A | MY47070282 | Sep. 12, 2019 | Sep. 11, 2020 |
| Spectrum Analyzer | Agilent | N9020A | MY49100619 | Sep. 12, 2019 | Sep. 11, 2020 |
| Attenuator | 50FP-006-H3 | JFW | 907763 | Sep. 12, 2019 | Sep. 11, 2020 |

Note: The calibration interval of the above test instruments is 12 months and the calibrations are traceable to international system unit (SI).

6.2.1. Test Specification

| | |
|--------------------------|---|
| Test Requirement: | FCC Part 20.21 (e)(8)(i)(B); FCC Part 20.21 (e)(8)(i)(D) |
| Test Method: | KDB935210 D03 Signal Booster Measurements v04r03 |
| Test Setup: | <pre> graph LR SG[Signal Generator] --> EUT[EUT] EUT --> SA[Spectrum Analyzer] optional[RF Attenuator (if required)] --- EUT </pre> |
| Test Procedure: | <ul style="list-style-type: none"> a) Connect the EUT to the test equipment as shown in Set-Up. Begin with the uplink output (donor port) connected to the spectrum analyzer. b) Configure the signal generator and spectrum analyzer for operation on the frequency determined in Frequency Band with the highest power level, but with the center frequency of the signal no closer than 2.5 MHz from the band edge. The spectrum analyzer span shall be set to at least 10 MHz. c) Set the initial signal generator power to a level well below that which causes AGC control. d) Slowly increase the signal generator power level until the output signal reaches the AGC operational limit (from observation of signal behavior on the spectrum analyzer; e.g., no further increase in output power as input power is increased). e) Reduce power sufficiently on the signal generator to ensure that the AGC is not controlling the power output. f) Slowly increase the signal generator power to a level just below (within 0.5 dB of) the AGC limit without triggering the AGC. Note the signal generator power level as (P_{in}). g) Measure the output power (P_{out}) with the spectrum analyzer as follows. h) Set RBW = 100 kHz for AWGN signal type and 300 kHz for CW or GSM signal type i) Set VBW \geq 3X RBW j) Select either the BURST POWER or CHANNEL POWER measurement tool, as required for each signal type. The channel power integration bandwidth shall be 99% occupied bandwidth (4.1 MHz). k) Select the RMS (power averaging) detector. l) Ensure that the number of measurement points per sweep \geq (2 x span)/RBW (Note: This requirement does not apply for BURST power measurement mode). m) Set sweep time = auto couple, or as necessary (but no less than auto couple value). n) Trace average at least 100 traces in power averaging (i.e., RMS) mode. o) Record the measured power level as P_{out} with one set of results for the GSM or CW input stimulus and another set of results for the AWGN input stimulus. p) Repeat the procedure for each operational uplink and downlink frequency band supported by the booster. |
| Test Result: | PASS |

6.2.2. Test Instruments

| Equipment | Manufacturer | Model | Serial Number | Calibration Date | Calibration Due |

6.5. Conducted Spurious Emission

6.5.1. Test Specification

| | |
|--------------------------|---|
| Test Requirement: | FCC Part2 Section 1051; FCC Rules Part 27 Subpart C, Section 27.53 |
| Test Method: | KDB 935210 D03 Signal Booster Measurements v04r03 |
| Limit: | <ul style="list-style-type: none"> •§2.1053, Conducted emissions limit = $43 + 10 \log (P) = -13 \text{ dBm}$ •§27.53(c), For operations in the 746-758 MHz band and the 776-788 MHz band On all frequencies between 763-775 MHz and 793-805 MHz, by a factor not less than $76 + 10 \log (P) \text{ dB} = -46 \text{ dBm}$ in a 6.25 kHz band segment, for base and fixed stations •§27.53(e), For operations in the 746-758 MHz, 775-788 MHz, and 805-806 MHz bands Emissions in the band 1559-1610 MHz shall be limited to $-70 \text{ dBW}(-40 \text{ dBm})/\text{MHz}$ equivalent isotropically radiated power (EIRP) for wideband signals, and $-80 \text{ dBW}(-50 \text{ dBm})$ EIRP for discrete emissions of less than 700 Hz bandwidth. |
| Test Setup: | <pre> graph LR SG[Signal Generator] --> EUT[EUT] EUT --> RA[RF Attenuator (if required)] RA --> SA[Spectrum Analyzer] </pre> |
| Test Procedure: | <ol style="list-style-type: none"> Connect the EUT to the test equipment as shown in Set-Up. Begin with the uplink output connected to the spectrum analyzer. Configure the signal generator for AWGN with a 99% occupied bandwidth of 4.1 MHz operation with a center frequency corresponding to the center of the CMRS band under test. Set the signal generator amplitude to the level determined in the power measurement procedure in Maximum power. Turn on the signal generator RF output and measure the spurious emission power levels with an appropriate measurement instrument as follows. Set RBW = measurement bandwidth specified in the applicable rule section for the operational frequency band under consideration (see Annex A for relevant cross-references). Note that many of the individual rule sections permit the use of a narrower RBW (typically $\geq 1\%$ of the emission bandwidth) to enhance measurement accuracy, but the result must then be integrated over the specified measurement bandwidth. Set VBW = $3 \times \text{RBW}$. Select the power averaging (RMS) detector. (See above note regarding the use of a peak detector for preliminary measurements.) Sweep time = auto-couple. Set the analyzer start frequency to the lowest radio frequency signal generated in the equipment, without going below 9 kHz, and the stop frequency to the lower band/block edge frequency minus 100 kHz or 1 MHz, as specified in the applicable rule part. Note that the number of measurement points in each sweep must be $\geq (2 \times \text{span}/\text{RBW})$ which may require that the measurement range defined by the start and stop frequencies above be subdivided, |

| | |
|---------------------|---|
| | <p>depending on the available number of measurement points provided by the spectrum analyzer. Trace average at least 10 traces in power averaging (i.e., RMS) mode.</p> <p>j) Use the peak marker function to identify the highest amplitude level over each measured frequency range Record the frequency and amplitude and capture a Test Plots for inclusion in the test report.</p> <p>k) Reset the analyzer start frequency to the upper band/block edge frequency plus 100 kHz or 1 MHz, as specified in the applicable rule part, and the analyzer stop frequency to 10 times the highest frequency of the fundamental emission. Note that the number of measurement points in each sweep must be $\geq (2 \times$ span/RBW) which may require that the measurement range defined by the start and stop frequencies above be subdivided, depending on the available number of measurement points provided by the spectrum analyzer.</p> <p>l) Use the peak marker function to identify the highest amplitude level over each of the measured frequency ranges. Record the frequency and amplitude and capture a Test Plots for inclusion in the test report.</p> <p>m) Repeat steps b) through l) for each supported frequency band of operation.</p> |
| Test Result: | PASS |

6.5.2. Test Instruments

| Equipment | Manufacturer | Model | Serial Number | Calibration Date | Calibration Due |
|-------------------|--------------|--------|---------------|------------------|-----------------|
| Signal Generator | Agilent | N5182A | MY47070282 | Sep. 12, 2019 | Sep. 11, 2020 |
| Spectrum Analyzer | Agilent | N9020A | MY49100619 | Sep. 12, 2019 | Sep. 11, 2020 |

Downlink

6.6. Noise Limits

6.6.1. Test Specification

| | |
|--------------------------|--|
| Test Requirement: | FCC Part20 Section 20.21(e)(8)(i)(A); 20.21(e)(8)(i)(H) |
| Test Method: | KDB D03 signal Booster Measurements v04r03 |
| Limit: | <p>§20.21(e)(8)(i)(A)(1), The transmitted noise power in dBm/MHz of consumer boosters at their uplink and downlink ports shall not exceed -103 dBm/MHz—RSSI.</p> <p>§20.21(e)(8)(i)(A)(2)(i), Fixed booster maximum noise power shall not exceed $-102.5 \text{ dBm/MHz} + 20 \log(F)$, where Frequency is the uplink mid-band frequency of the supported spectrum bands in MHz.</p> |
| Test Setup: | <p>Figure 3 – Noise limit test setup (also used for 7.8) Donor Port</p> <p>The diagram shows a simplified test setup. An 'EUT with Terminated Input Port' is connected to a 'Spectrum Analyzer' via a directional coupler. A 'Matched Load' is connected to the output port of the EUT. The 'Spectrum Analyzer' also has a 'Matched Load' connected to its input port.</p> <p>Figure 4 – Test setup for uplink noise power measurement in the presence of a downlink signal</p> <p>The detailed diagram shows a more complex setup. A 'Signal Generator w/ Bandlimited 4.1 MHz AWGN on Center of CMRS DL Band Under Test' feeds into a 'Coupled Port from EUT'. This port connects to a 'Directional Coupler'. The 'Directional Coupler' has two outputs: one to an 'EUT with Terminated Server Antenna Input Port' and another to a 'Notch Filter to Suppress DL Signal (if required)'. The output of the notch filter goes through an 'RF Attenuator (if required)' and then to a 'Spectrum Analyzer Tuned to UL of CMRS Band Under Test'. The 'EUT with Terminated Server Antenna Input Port' is also connected to a 'Matched Load' via a 'Server Port'.</p> |
| Test Procedure: | <ol style="list-style-type: none"> Connect the EUT to the test equipment as shown in Figure 3. Begin with the uplink output (donor) port connected to the spectrum analyzer. When measuring downlink noise, connect the downlink output (server) port to the spectrum analyzer. Set the spectrum analyzer RBW to 1 MHz with the VBW ≥ 3 . RBW. Select the power averaging (rms) detector and trace average over at least 100 traces. Set the center frequency of the spectrum analyzer to the center of the CMRS band under test with the span ≥ 2 . the CMRS band. Measure the maximum transmitter noise power level. Save the spectrum analyzer Test Plots as necessary for inclusion in the final test report. Repeat 7.7b) to 7.7f) for all operational uplink and downlink bands. Connect the EUT to the test equipment as shown in Figure 4 for uplink noise power measurement in the presence a downlink signal. Affirm the coupled path of the RF coupler is connected to the spectrum analyzer. Configure the signal generator for AWGN operation with a 99% OBW of 4.1 MHz. |

| | |
|---------------------|---|
| | <ul style="list-style-type: none"> j) Set the spectrum analyzer RBW for 1 MHz, VBW \geq 3 . RBW, with a power averaging (rms) detector with at least 100 trace averages. k) Set the center frequency of the spectrum analyzer to the center of the CMRS band under test, with the span \geq 2 the CMRS band. This shall include all spectrum blocks in the particular CMRS band under test (see Appendix A). l) For uplink noise measurements, set the spectrum analyzer center frequency for the uplink band under test, and tune the signal generator to the center of the paired downlink band. m) Measure the maximum transmitter noise power level while varying the downlink signal generator output level from -90 dBm to -20 dBm, as measured at the input port (i.e., downlink signal level at the booster donor port node of Figure 4), in 1 dB steps inside the RSSI-dependent region, and in 10 dB steps outside the RSSI-dependent region. Report the six values closest to the limit, with at least two points within the RSSI-dependent region of the limit. See Appendix D for noise limits graphs. n) Repeat 7.7.1h) through 7.7.1m) for all operational uplink bands. <p>Variable uplink noise timing</p> <p>Variable uplink noise timing is to be measured as follows, using the test setup shown in Figure 4.</p> <ul style="list-style-type: none"> a) Set the spectrum analyzer to the uplink frequency to be measured. b) Set the span to 0 Hz, with a sweep time of 10 seconds. c) Set the power level of signal generator to the lowest level of the RSSI-dependent noise [see 7.7.1m)]. d) Select MAX HOLD and increase the power level of signal generator by 10 dB for mobile boosters, and 20 dB for fixed boosters. e) Confirm that the uplink noise decreases to the specified level within 1 second for mobile devices, and within 3 seconds for fixed devices.¹² f) Repeat 7.7.2a) to 7.7.2e) for all operational uplink bands. g) Include Test Plotss and summary table in test report. |
| Test Result: | PASS |

6.6.2. Test Instruments

| Equipment | Manufacturer | Model | Serial Number | Calibration Date | Calibration Due |
|-------------------|--------------|-------------|---------------|------------------|-----------------|
| Signal Generator | Agilent | N5182A | MY47070282 | Sep. 12, 2019 | Sep. 11, 2020 |
| Spectrum Analyzer | Agilent | N9020A | MY49100619 | Sep. 12, 2019 | Sep. 11, 2020 |
